

FryeFlow Systems™

"The Ultimate Under the Grate Erosion Control"

Metal Frame is specially designed to hold a basket under grate. Basket is made of high flow material allowing water to flow directly through grate and basket, leaving all sediment and debris behind.

Maintenance on **FryeFlow Systems™** is easy. Simply remove grate, lift out and dump debris; or just use a vac-ter unit. Bags are reusable, but should be monitored after each storm event.

- **Woven Geotextile for strength**
- **Installs in minutes**
- **Greatly reduces ponding in streets**
- **Re-usable**
- **Custom sizes available**
- **A one time expense**

You will be amazed at the volume of silt and debris that will be trapped in FryeFlow Systems™.
